AI ANALYSIS & REASONING

Verdict: Undetermined. While `inetservpl` is currently unflagged by VirusTotal and has no ML risk score, the crucial absence of an associated IP address prevents any comprehensive analysis of its hosting infrastructure or historical activity.

Evidence: VirusTotal reports 0/0 flags, and no ML risk score is available. However, the inability to identify an IP address means key investigative steps, such as WHOIS, passive DNS, and IP-based reputation checks, cannot be performed.

Recommended Action: Resolve the domain `inetservpl` to its current IP address(es). Subsequently, perform detailed OSINT lookups on the resolved IP(s), including WHOIS, passive DNS, and re-check reputation with tools like AbuseIPDB to determine its true nature.
